

Name: Rajeshwar

Mehrotra

Introduce yourself in a brief paragraph:

Rajeshwar (Raj) Mehrotra finished his Masters in Hydrology at the prestigious University of Roorkee (now known as I.I.T. Roorkee) in India, graduating with a Gold Medal. Before joining UNSW, Raj was a senior scientist at the National Institute of Hydrology (NIH), the main hydrological research organization in India. During his stay at the NIH, Raj had worked on many projects dealing with hydrological, hydraulic and climatological problems. Raj specialises in the application of statistical techniques to problems in hydrology and climatology. He possesses more than 16 years experience in both fields. His main contribution to the field has been to develop stochastic downscaling techniques for simulation of multisite daily rainfall sequences.
