

Name: Sanjay

Nimbalkar

Introduce yourself in a brief paragraph:

I am proud resident of India having permanent residence at Pune, Maharashtra where my parents stay. I have worked as academic staff in engineering college of state government of Maharashtra before coming to Australia. Currently I am working as research fellow in Rail-CRC project at University of Wollongong. I have obtained PhD from Indian Institute of Technology Bombay under supervision of Prof. Deepankar Choudhury in 2007 on the topic 'Seismic Analyses of Retaining Walls by Pseudo-dynamic method'. I was also working as postdoctoral research fellow in research project funded by Atomic Energy Regulatory Board Safety Research Programmes, Government of India after completion of PhD.

I am very much excited and pleased to learn about GYAN project of government of India and would feel very proud if I would be able to provide some inputs/ assistance towards quality improvement and skills enhancement of my brothers who are working in technical institutes spread throughout the India.
