

Dr Gangadhara Prusty is a member of academic staff in the School of Mechanical & Manufacturing at the University of New South Wales. He has a lengthy teaching experience at the undergraduate and postgraduate level of engineering education. His main research interests include engineering mechanics, solid mechanics, finite element analysis, fracture mechanics and failure analysis of composite laminated structures. His research covers the use of composites in aerospace, marine and general applications. He is a member of Engineers Australia, Royal Institute of Naval Architects (RINA) and Australasian Association for Engineering Education (AaeE).
