

Dr Puri is a Research Fellow & Associate Professor Bioprocessing at Deakin University, Victoria, Australia. He has a PhD in Protein Biotechnology and has worked as a research scientist on biophysical characterization of recombinant proteins at University of Oxford, UK. Before moving to Australia, he worked as A/Professor in India and contributed towards development of Industrial biotechnology discipline. Dr Puri's research almost for two decades has focused on microbial protein expression which includes production of recombinant proteins/ enzymes to improve their functional efficiency, specific activity for carrying out transformations of flavonoids / oligosaccharides/ pharmaceutical intermediates with health benefits. He has published research papers in high impact International journals and been invited to present his work at various conferences/ symposium. He loves listening to soft music, exploring nature, and immersed in a thought that involves International education. He is passionate about talking and educating human resources in biotechnology.
